Senior Full Stack Developer with 6+ years of experience specializing in **PHP** and **Laravel**, with expertise in building custom **ERP**, **CRM**, **CMS**, and business applications across multiple industries. Skilled in developing automated business workflows, **REST APIs**, and payment integrations using **SQL**, **JavaScript**, **TypeScript**, **HTML**, and **CSS**. Experienced with **Git** and **GitHub** for version control and collaborative development, while leveraging AI tools such as **GitHub Copilot** and **Claude** to accelerate delivery, improve code quality, and solve complex technical challenges. Focused on building practical, maintainable solutions that improve business efficiency, usability, and operational processes.

Work Experience

Senior Software Engineer — **Fortix** — Perth, Australia — **Jan 2024 – Sep 2026**

- Modernized a custom ERP system using **PHP, Laravel, HTML, CSS, and JavaScript**, migrating legacy functionality and adapting configurations to diverse business requirements.
- Upgraded TinyMCE and developed an internal inline file-upload solution, eliminating reliance on a paid plugin and reducing additional software costs.
- Automated approval and claims workflows to reduce manual processing and administrative effort, while enhancing customer management features to support more consistent client engagement.
- Modernized the ERP interface using **Svelte, Tailwind CSS, HTML, CSS, and JavaScript**, improving usability and making business workflows easier to navigate.
- Leveraged **GitHub Copilot and Claude** to refactor legacy PHP code, troubleshoot complex issues, implement ERP workflows, and explore edge cases, accelerating development and supporting more reliable implementations.

Lead Developer — **Devhouse Studios Pty Ltd** — Perth, Australia — **May 2022 – Jan 2024**

- Led development for two nonprofit clients, building tailored CRM features for donor, campaign, and stakeholder engagement management using **PHP and Laravel**.
- Developed workflow automation and reporting tools to reduce manual administrative work, improve campaign visibility, and help nonprofits manage donor relationships more effectively.
- Built a reusable forms framework using **PHP, Laravel, Livewire, HTML, CSS, and JavaScript** to standardize data collection and accelerate the delivery of custom forms.
- Improved donation transparency and accountability through reporting and audit functionality, making donation records and campaign activity easier to review and track.

Software Developer — **Social Impact Marketing, Ltd** — London, UK — **Feb 2020 – May 2022**

- Developed and supported a real estate bidding platform end-to-end using **Next.js**, enabling bidders to submit offers and property owners to review and select the top five bids.
- Integrated **Stripe** for one-time commission payments and subscription-based bidding plans, using **Supabase and PostgreSQL** for backend services and data management, with **Vercel** for deployment.

Technologies and Languages

- Languages & Frameworks: PHP, Laravel, React, Next.js, HTML, Javascript, CSS
- Databases & Cloud: MySQL, PostgreSQL, Docker, Vercel, Supabase
- Tools & Practices: Git, Data Structures & Algorithms, Database Design, Project Management
- AI Tools: Github Copilot, Claude

Education and Certifications

- **B.Sc. Computer Science – Cum Laude,** University of San Carlos — **2020 – 2024**

Projects

- **Suroyan —** A passion project built with Next.js, Supabase, and Vercel that helps users plan trips by organizing travel schedules, accommodations, and destinations into a structured itinerary. It uses route optimization to group nearby destinations and generate an efficient daily travel plan, reducing unnecessary travel between locations.
