<https://iza-the-great.vercel.app/>

Senior Full Stack Developer with 6+ years of experience specializing in **PHP** and **Laravel**, with expertise in building custom **ERP**, **CRM**, **CMS**, and business applications across multiple industries. Skilled in developing automated business workflows, **REST APIs**, and payment integrations using **SQL**, **JavaScript**, **TypeScript**, **HTML**, and **CSS**. Experienced with **Git** and **GitHub** for version control and collaborative development, while leveraging AI tools such as **GitHub Copilot** and **Claude** to accelerate delivery, improve code quality, and solve complex technical challenges. Focused on building practical, maintainable solutions that improve business efficiency, usability, and operational processes.

## Work Experience

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                              |                     |

## Technologies and Languages

- Languages & Frameworks: PHP, Laravel, React, [Next.js](#), HTML, Javascript, CSS
- Databases & Cloud: MySQL, PostgreSQL, Docker, Vercel, Supabase
- Tools & Practices: Git, Data Structures & Algorithms, Database Design, Project Management
- AI Tools: Github Copilot, Claude

## Education and Certifications

- B.Sc. Computer Science – Cum Laude**, University of San Carlos2020 – 2024

## Projects

- Suroyan** — A passion project built with Next.js, Supabase, and Vercel that helps users plan trips by organizing travel schedules, accommodations, and destinations into a structured itinerary. It uses route optimization to group nearby destinations and generate an efficient daily travel plan, reducing unnecessary travel between locations.
