Senior Full Stack Developer with 6+ years of experience specializing in PHP and Laravel, with experience designing and developing custom ERP, CRM, CMS, and business applications across multiple industries. I have built systems that automate custom business workflows, payment integrations, and manage business problems. I leverage AI tools such as GitHub Copilot and Claude to accelerate development, improve code quality, and solve complex technical challenges. I am focused on delivering practical solutions that improve business efficiency, usability, and operational processes.

Work Experience

Senior Software Engineer	Fortix Perth, Australia	Jan 2024 – Present
- Developed and enhanced a custom ERP system with customized configurations depending on business needs - Upgrading TinyMCE and building an internal inline file-upload solution without requiring a paid plugin. - Developed approval workflows, claims management, and customer management to streamline business operations. - Contributed to modernizing the ERP UI and improving overall usability. Tech Stack: PHP, Laravel, SQL, Tailwind CSS, Svelte		
Lead Developer	Devhouse Studios Pty Ltd Perth, Australia	May 2022 – Jan 2024
- Delivered custom CRM solutions for non-profit organizations, improving donor, campaign, and engagement management. - Designed tailored workflows, automation, and reporting tools to improve operational efficiency and campaign visibility. - Architected an in-house Laravel forms framework to standardize data collection and accelerate application development. Tech Stack: PHP, Laravel, SQL, Tailwind CSS, Livewire		
Software Developer	Social Impact Marketing, Ltd London, UK	Feb 2020 – May 2022
- Developed a custom real estate bidding platform that streamlined bid submission and enabled property owners to evaluate and select from the top five bids. - Integrated Stripe to support secure one-time commission payments and subscription-based bidding plans, enabling flexible monetization. Tech Stack: React.js, Supbase, Vercel		

Technologies and Languages

- Languages & Frameworks: PHP, Laravel, React, Next.js
- Databases & Cloud: MySQL, PostgreSQL, Docker, Vercel, Supabase
- Tools & Practices: Git, Data Structures & Algorithms, Database Design, Project Management
- AI Tools: Github Copilot, Claude

Education and Certifications

- B.Sc. Computer Science – Cum Laude**, University of San Carlos 2020 – 2024

Publications

- Green Vehicle Routing Problem with Multiple Technologies and Partial Recharges Using the Flamingo Search Algorithm** – Developed and evaluated an optimization model using the Flamingo Search Algorithm to solve complex green vehicle routing problems involving electric vehicles, multiple charging technologies, and partial recharges. Tested and analyzed cost, fitness, iterations, and execution time to evaluate its effectiveness for logistics and transportation optimization. 2024

Projects

- Suroyan** — A passion project built with Next.js, Supabase, and Vercel that helps users plan trips by organizing travel schedules, accommodations, and destinations into a structured itinerary. It uses route optimization to group nearby destinations and generate an efficient daily travel plan, reducing unnecessary travel between locations.
